Github: https://github.com/methleshsingh99

OBJECTIVE

Aspiring DevOps Engineer with hands-on experience in CI/CD pipelines, Docker, Terraform, and cloud platforms (AWS & Azure). Proficient in container orchestration using Kubernetes, infrastructure automation using Terraform, and deployment workflows using Argo CD. Seeking an entry-level DevOps or Cloud Engineer role to contribute to scalable infrastructure, automation, and DevSecOps practices in a growth-oriented organization.

EDUCATION

Degree/Course	Institution	Board / University	Year of pass	CGPA / Percentage
B.Tech in Computer Science & Engineering	Malla Reddy Institute of Engineering & Technology	Jawaharlal Nehru Technological University Hyderabad	2025	7.45 CGPA
Diploma in Computer Engineering	TRR College of Engineering	State Board of Technical Education and Training (SBTET), Telangana	2019	70.12 %
Class X	Nagarjuna High School	Telangana Secondary School Certificate	2015	7.8 CGPA

SKILLS

• CI/CD Tools: Jenkins, GitHub Actions, Argo CD

• Containerization: Docker

• Orchestration: Kubernetes

• Infrastructure as Code: Terraform

• Cloud Platforms: AWS (EC2, S3, IAM, ASG, Load Balancer, Cloud Watch, Route53), Azure (Virtual Machines, Storage Accounts, Azure DevOps), GCP (basics)

• Monitoring: Prometheus, Grafana

• Scripting: Bash, Python

• Version Control: Git, GitHub
• Security Tools: SonarQube, OWASP, Trivy
• Configuration Management: Ansible
• Operating Systems: Linux (Ubuntu), Windows

PROFILE SUMMARY

- Self-driven learning and project experience in DevOps and cloud technologies.
- Built end-to-end CI/CD pipelines using Jenkins and GitHub, integrating automated builds, security scans (SonarQube, OWASP, Trivy), and Docker image deployments.
- Hands-on with AWS services: EC2, S3, IAM, AMI, ASG, Load Balancer, EFS, CloudWatch, CloudTrail, Route53.
- Deployed and monitored containerized microservices on Kubernetes using Argo CD (GitOps) and Prometheus/Grafana.
- Familiar with Azure: Virtual Machines, Storage Accounts, Azure DevOps, and basic networking.
- Comfortable with Linux administration, Bash scripting, and Git-based workflows.

PROJECT

PROJECT 1: CI/CD Pipeline using Jenkins, AWS S3 & Tomcat

Tools: Jenkins, Amazon Web Services (EC2, S3, IAM), Apache Maven, Apache Tomcat, Git, GitHub

GitHub: https://github.com/methleshsingh99/jenkins-cicd-tomcat-deployment

Roles & Responsibilities:

- Designed and implemented a Jenkins CI/CD pipeline covering 4 stages: build, test, artifact upload (Amazon S3), and deployment to Apache Tomcat on EC2.
- Automated the full workflow from GitHub code commit to live deployment, reducing manual deployment effort to zero.
- Configured IAM roles and S3 bucket policies for secure artifact storage.
- Resolved real-world issues including port conflicts, service restart failures, and permission errors during deployment.
- Verified successful deployment by accessing the live application through browser via EC2 public IP.

PROJECT 2: Microservices Deployment on AWS

Tools: Terraform, Jenkins, Docker, Kubernetes, Argo CD, Prometheus, Grafana, SonarQube, OWASP, Trivy, Git, GitHub, AWS.

Roles & Responsibilities:

- Built Jenkins CI pipelines integrated with GitHub for automated builds, unit testing, and Docker image creation across multiple microservices.
- Implemented a 3-layer security and quality gate: SonarQube (code quality), OWASP dependency check (vulnerability scan), and Trivy (Docker image scan).
- Containerized microservices using Docker; built and pushed images to Docker Hub registry for version-controlled deployments.
- Configured Argo CD for GitOps-based Continuous Deployment — any Git push to the manifest repo triggered automatic cluster sync.
- Set up Prometheus and Grafana dashboards with Node Exporter to monitor CPU, memory, and pod health across the Kubernetes cluster.
- Provisioned cloud infrastructure using Terraform for repeatable and version-controlled environment setup on AWS.
